### Magazine Test

- Teknikan Maailma  
- Very Recommendable ('12)  
Test Winner
- Gute Fahrt  
- Very Recommendable ('13)  
(205/55R16V)

### OE Application

- BMW 1 series, Mini (205/55R16W)
- VW Golf (205/55R16V)
- Mercedes S-Class, V-Class,  
BMW 1Series, VW Passat, Touran,  
Mini Clubman, Audi A1, Opel Astra

## ***ventus Prime<sup>3</sup>***

### Magazine Test

- Auto Bild  
- Very Recommendable ('16)  
Test Winner (205/55R16V)
- ADAC  
- Very Recommendable ('18)  
(5/16)

### OE Application

- AUDI A1 (195/55R16V XL)
- VW Passat (215/55R17V)
- Audi A8, A1, BMW 2 Series Active  
Tourer, VW Passat, T Cross, T Roc,  
Mini, Skoda Karoq, Renault Captur,  
Ford Focus

# 2021 Summer Product

Concept

# ***WHY YOU SHOULD CHOOSE THE VENTUS PRIME 4***

- Outstanding braking control on wet roads
- Optimised comfort with low noise technology
- Longer mileage compared to Ventus Prime 3

Product Concept

**Low Noise Technology**

**Outstanding Braking  
on Wet Roads**

**Excellent Mileage**

Technology

# Outstanding Braking on Wet Roads

Safer driving while on wet roads by minimising the small bumpy holes on the surface of the tyre.

## Uniform ground pressure

## Excellent drainage in the transverse direction

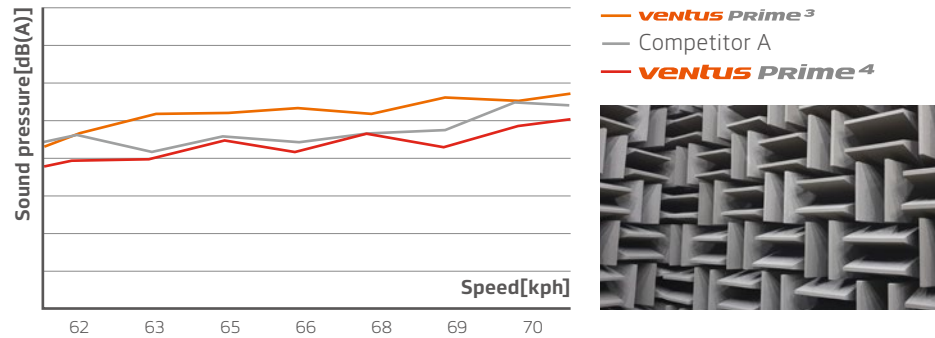

# Low Noise Technology

Noise-blocking anechoic chamber wall pattern technology for low noise.

## Low Noise Groove Wall Knurling - Low Noise Technology

Groove resonance and pattern noise are dispersed by applying a wedge-shaped (3D-Wedge) structure that applies the anechoic chamber wall principle.

### Anechoic Chamber

※ Hankook Tyre Noise test data

## RO (Round Optimisation) - Noise & Ride

By increasing the total number of pitches, the impact on the road surface is minimised providing a more comfortable ride.

# High Mileage Compound Technology

Improved tyre mileage with a new compound material for strong cohesion.

## Mileage Test Results

※ Above Internal result tested in 2020 on IDIADA PG (225/50R17W)

## High Mileage Compound Technology

Increased functional polymers provide more chemical bonding between polymer and filler producing less rolling resistance. This green compound matrix provides powerful linking to a higher amount of silica than previously used, that enhances wet and wear performance.

Technology

# Extreme Precision Handling Technology

Curling is prevented by rounding the corners of the tyre.

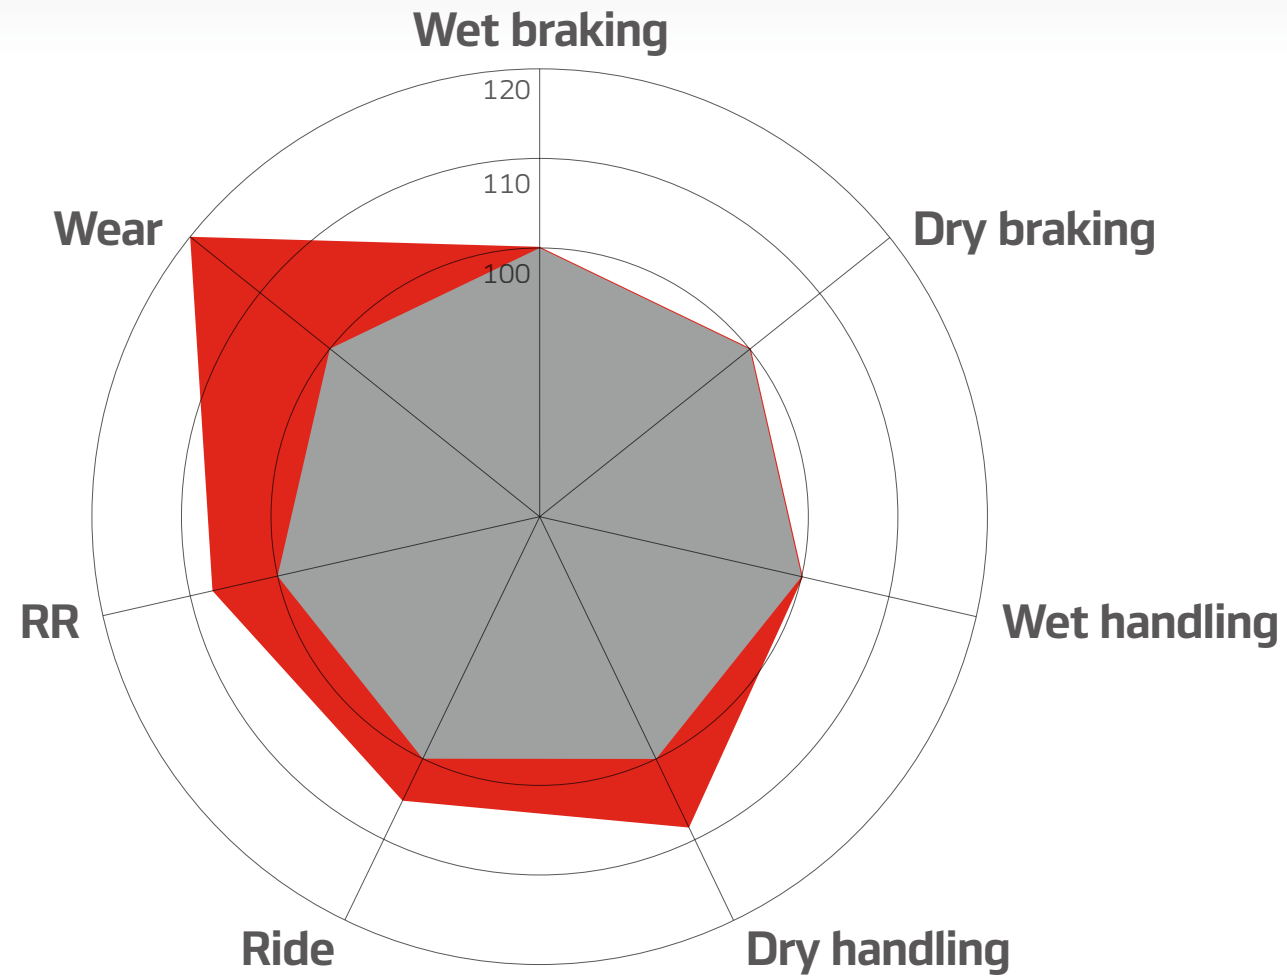

## Zigzag 3D Trend Technology

This is advantageous for dry performance by increasing the friction force of the block according to the deformation.

# Performance Results

● **ventus Prime<sup>3</sup>**  
● **ventus Prime<sup>4</sup>**

※ Above Internal result tested in 2020 on IDIADA PG (225/50R17W)

# Tyre Structure

## Tread Compound

HSSC (Highly Enriched Synthetic Silica Compound) is a new compound, in which the highly purified and quality silica is vulcanised at low temperatures for twice the duration compared to regular tyres. This enables the increased blending between molecules that secures a solid driving performance and improved mileage.

## Jointless Full Cover Reinforcement Belt

Ideal tread strength.

## Application of High Strength Steel Belt Wire

Using high strength belts that perfectly absorb external shock, the durability and comfort of the tyre has been greatly improved.

## Dual Layer Fibre Stiffener

With the dual structure of the carcass fibre stiffener, the resistance of the tyre is structurally assured.

## Folded Belt Edge Tape

Endurance of the belt has been enhanced.

## Strong Jointless Bead Wire

By increasing the binding force between the wheel and the joint, even with high initial acceleration, the tyre will always remain safely attached to the wheel.

# Available Sizes

Inch	Series	Size	Pattern
20	45	215/45R20W XL	K135
	55	195/55R20H XL	K135
