Key performance

A winter perfection in all conditions

Improvement in performance

■ Winter i\*cept evo<sup>2</sup>  
■ Winter i\*cept evo<sup>3</sup>

#### Wet Performance

The adaption of highly refined resin infused compound enhances the grip in the wet by keeping it flexible at a wide temperature range. Water pipe kerf and wide lateral main groove improve the wet driving performance by efficiently expelling the water out of the tread surface.

#### Snow Performance

The unidirectional tread together with snow pick shaped grove and 3D- Winter sips enhances driving stability and improves braking performance on snow covered roads.

#### Dry Performance

Wide outside shoulder block and an optimized block stiffness improve handling performance and steering precision on dry roads.

# A winter perfection in all conditions

## Snow 3D winter sipe

- snow pick traction groove
- optimized zig-zag lateral groove
- 3D winter sipe

## Wet Water pipe kerf

- water pipe kerf
- wide lateral groove
- V-shaped pattern design
- Aqua Pine compound technology

## Dry Wide shoulder block

- wide shoulder block
- optimized block stiffness

# Snow performance

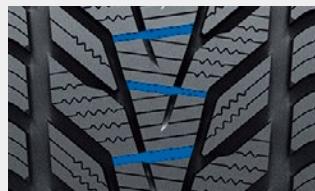

Provides top snow performance by applying 3D winter sipe in a new unidirectional snow groove design.

## A Snow pick traction groove

Unidirectional Tread design with gull wing shaped improves the traction and braking performance on snow.

## B Optimized zig-zag lateral groove

Improve snow handling performance and steering control through optimized groove angle.

## C 3D winter sipe

Serrated winter sipe improves braking performance in winter driving. This special sipe enhances driving stability by minimizing block movement.

# Wet performance

Incorporating water pipe kerf and wide lateral groove within the V-shaped pattern reduces the risk of hydroplaning and improves performance on wet road surfaces.

## D Water pipe kerf

The water pipe kerf placed inside the shoulder block improves performance on wet surface by efficiently transporting water out of the main groove.

## E Wide lateral groove

20% wider lateral groove improves water displacing capability compared to winter i\*cept evo<sup>2</sup>.

## F V-shaped pattern

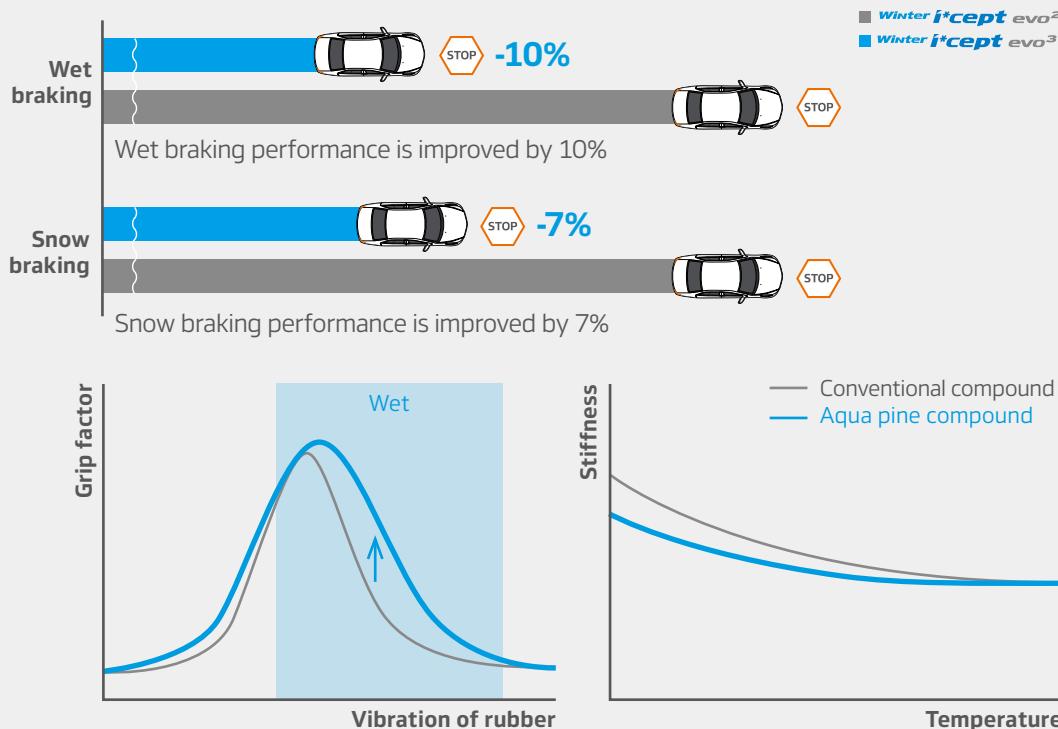

V-shaped pattern efficiently help to distribute water to the side, improving hydroplaning performance.

# Aqua pine compound

Second Generation Aqua Pine compound consists of highly refined resin, provides significantly improved wet and snow grip performance.

## G Aqua pine compound

Hankook's advanced mixing technology with high loading silica and traction enhancing additives is used for the tread compound to improve the wet performance.

The Aqua pine compound ensures the flexibility in a wide temperature range for a long time.

### Increased grip on wet and snow road

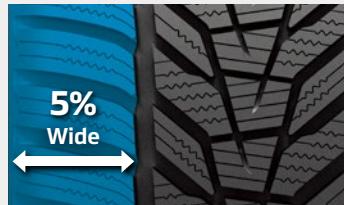

Maximizing wet and snow grip by adopting highly refined resin.

# Dry performance

Wide shoulder block provides excellent steering stability.

The optimized block stiffness improves cornering hardness on dry surface.

## ■ Wide shoulder block

Wider outside shoulder block ensures dry handling performance, lateral stability and steering response.

## ■ Optimized block stiffness

Reduction of the kerf thickness optimizes each block stiffness to achieve advanced dry performance and road holding.

**Advanced Silica Compound for Wet Performance**

The High loading silica compound provides an increased wet performance. Natural ingredients ensure the rubber's flexibility in a wide temperature range.

**Application of High Strength Steel Belt Wire**

A Full cover steel layer increases the tread stiffness and keeps straight stability even at higher speeds. The application of special edge covers improve steering response.

**Dual Layer Fibre Stiffener**

The dual structure of the carcass fibre stiffener assures tyre durability and stress resistance.

**High Strength Bead Wire**

The extra high tensile bead wire assures driving stability even at higher speed.
